I want to… **Goal**

Because… **Benefit**

📖 Scenarios

Given… **Context**

When… **Action**

Then… **Result**

Title

User should be able to save a story

User Story

As a user

I want to save a story I’m reading

Because I found it useful

Scenario

Given that I’m reading a story

When I tap the bookmark icon to save a story

Then save it to my ‘Saved Stories’

Features

MVP

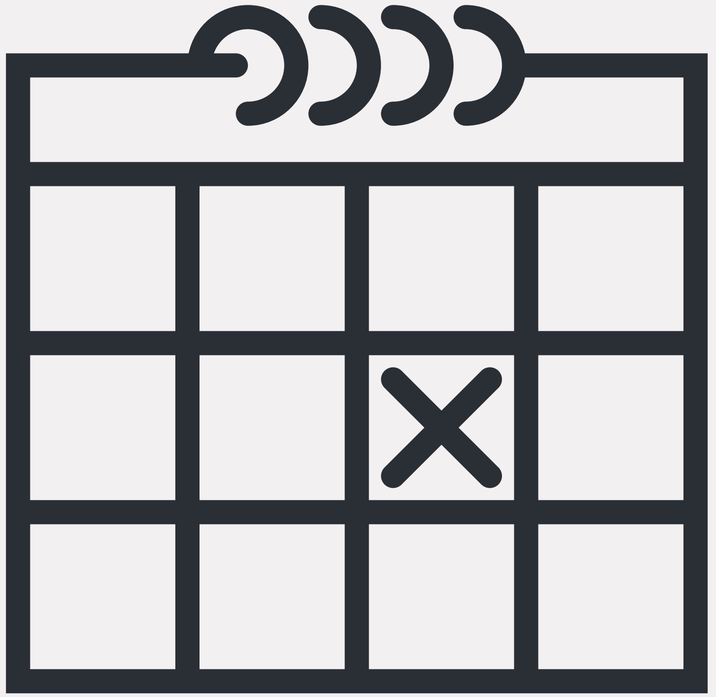
MINIMUM

VIABLE

PRODUCT

Wouldn't it be cool...

if we had something to demo?



You don't need forms to login.

```
app.get('/login/:id', (request, response) => {
  request.session.user_id = request.params.id;
  response.redirect('/');
});
```

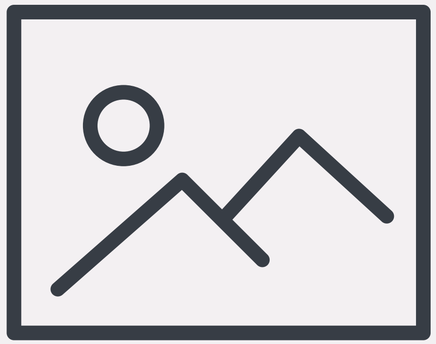
Resource



A **photo**.

/Routes

Browse/List/Index **GET /photos**

Create/Add **POST /photos**

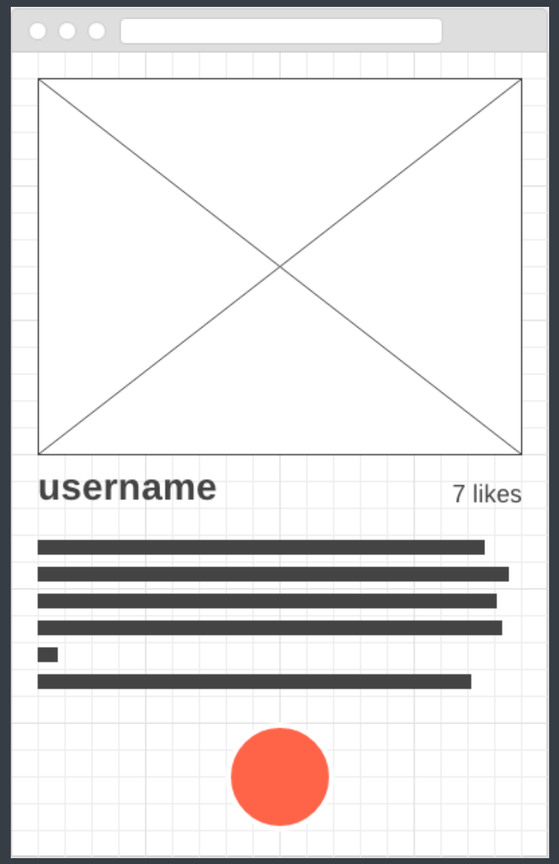
Read/Show **GET /photos/:id**

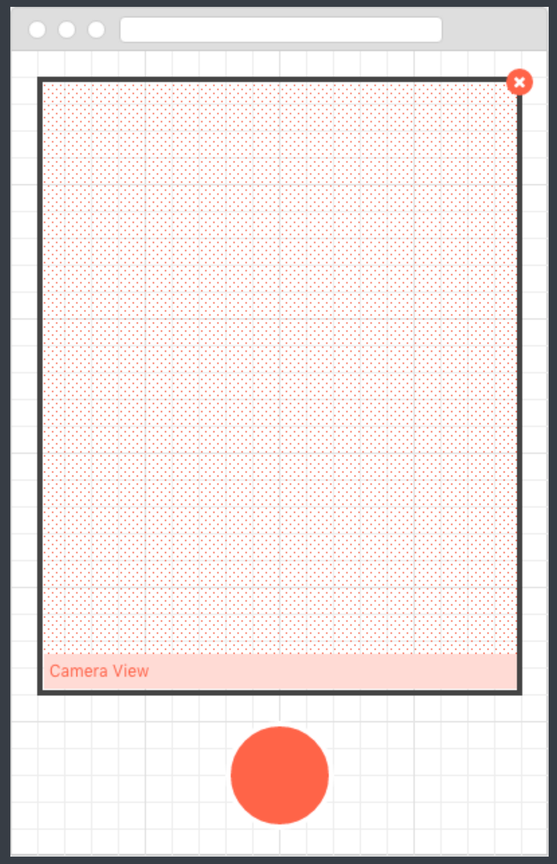
Update/Edit **PUT /photos/:id**

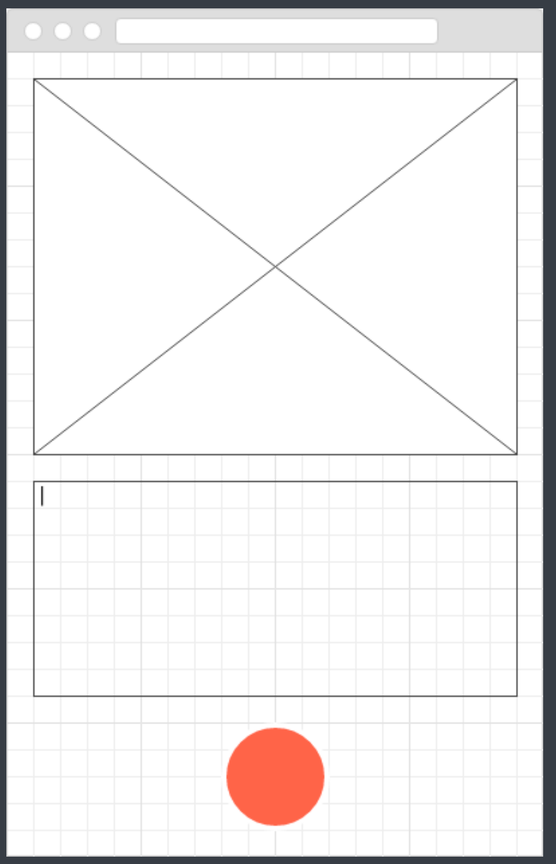
Remove/Destroy **DELETE /photos/:id**

Wireframes

As a user, I want to post a photo, because I like to share my experiences with friends.







Design

is important.

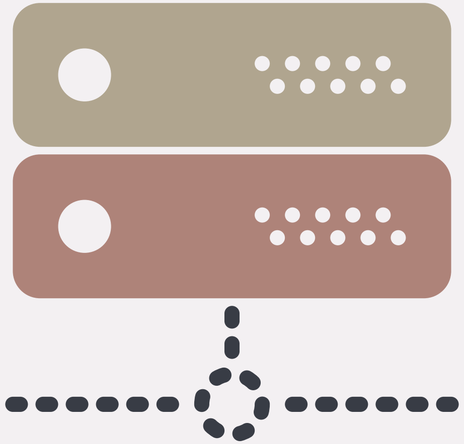
Use

Trello

Now we code.

On the Client

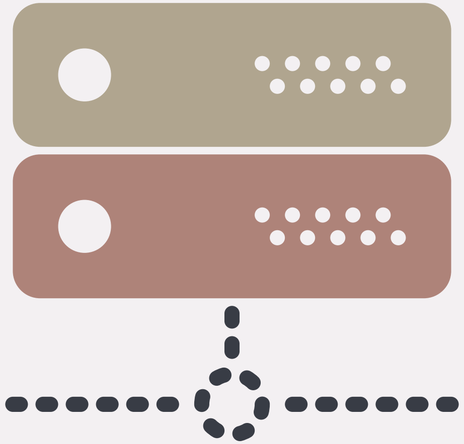


Start with a static page.

```
<!doctype html>
<html lang="en">
  <head>
    <meta charset="utf-8">
    <meta name="description" content="<fill this in>">
    <meta name="author" content="<fill this in>">

    <style>
    </style>
  </head>
  <body>
  </body>
</html>
```

On the Server



```
SELECT * FROM photos;
SELECT * FROM photos WHERE user_id = $1;
SELECT * FROM photos WHERE id = $1;
SELECT * FROM users;
INSERT INTO photos (url, user_id) VALUES ($1, $2);
DELETE FROM photos WHERE id = $1;
```

Start with your queries.

Match them to routes.

```
GET /photos
GET /users/:id/photos
GET /photos/:id
GET /users
POST /photos
DELETE /photos/:id
```

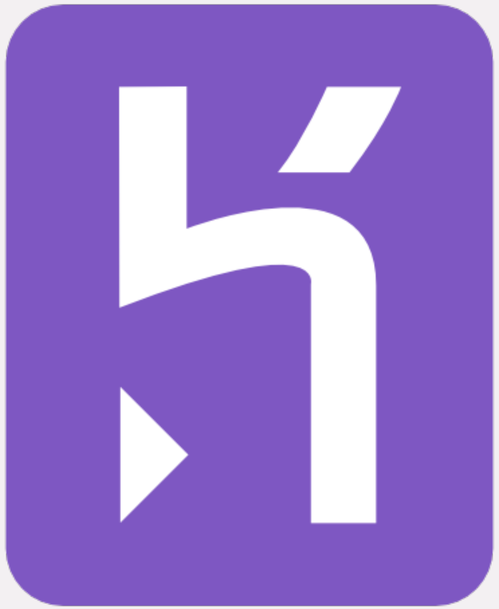
```
app.get('/users/:id/photos', (req, res) => {
  knex(‘photos’)
  .where('user_id', req.params.id)
  .then(photos => {
    res.json(photos);
  });
});
```

Provide the data through the interface.

You could pass the data to a template.

```
app.get('/users/:id/photos', (req, res) => {
  knex(‘photos’)
  .where('user_id', req.params.id)
  .then(photos => {
    res.render(‘photos_index’, { photos });
  });
});
```

You don’t have to deploy.



http://127.0.0.1:8080/ to demo.

Questions?
